Eco-Conscious Products

Safe and environmentally friendly products

Okamura's environmental priorities in product design and assessment ensure the delivery of safe, eco-conscious products that give consumers peace of mind.

A harmony of design, ecology, and economy

Okamura reduces raw material inputs during manufacture by analyzing finite elements with CAE and adopting other leading-edge methods. We harmonize design, ecology, and economy.

Keeping clean air

The furniture is a critical part of any office space. This is another factor that motivates Okamura to protect the air quality of offices by positively using raw materials and paints free of volatile organic compounds (VOCs).

Designs for easier reuse and recycling after use

Okamura designs products that can be easily broken down into homogeneous materials to facilitate the reuse of parts recovered from post-use products and material recycling. The materials used in major components are clearly identified.

Developing eco-conscious products

Customer needs Social requirements Regulations Industrial standards

Our responsibility

Motto
"Quality pays for itself"

Long-term environmental vision GREEN WAVE 2020

Action principles
Reducing environmental impact by
"manufacturing".

Product planning assessment

- Functions, performance, design
- Product safety
- Environmental consciousness
- Price
- Responses to regulations

Product assessment

- Material selection
- Efficiency in material use
- Energy efficiency
- Ease of disassembly
- Recyclability

Eco-conscious production

- Conserving energy
- Mitigating harmful emissions
- Zero emissions

Requirements in product design

- Conserving resources and reducing volume
- Using recycled materials
- Reusing materials and product parts
- Ease of recycling
- Sound air quality
- Product safety

- Reduced packaging materials
- Information disclosure

Design for the environmen

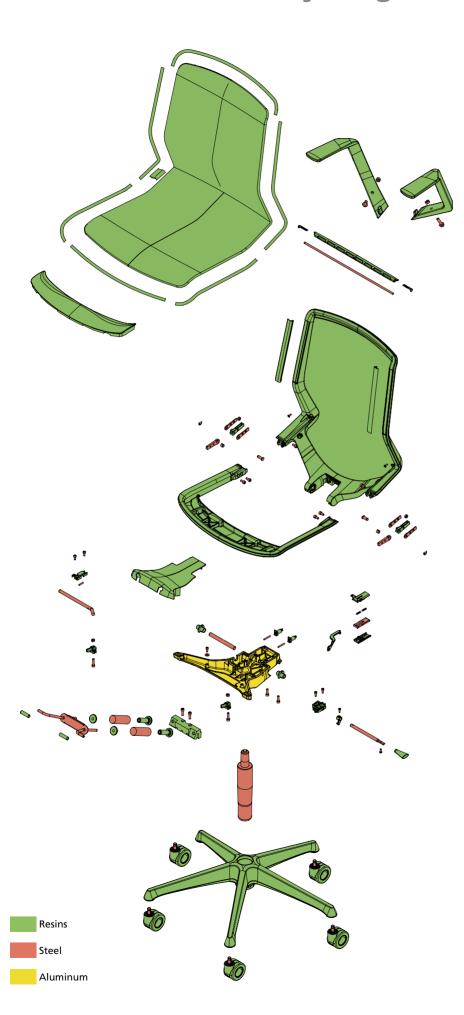

CYNARA's resin back frame, a design based on a simulated analysis of finite elements, bespeaks the outstanding efforts behind Okamura's eco-conscious designs.

Okamura's product developers optimize the use of resources by minimizing the amounts of materials used without sacrificing the outstanding quality, strength, and safety of the products.

Product testing

- Measuring the volumes of VOCs emitted
- Testing durability and load bearing strength
- Testing stability
- Testing for transport
- Measuring the volumes of specific harmful substances

Materials & Recycling

Total control of every material used

Okamura collects thorough information on the materials, surface finishing methods, and other aspects of the parts used in its products, from the main components of its office equipment to individual screws. Detailed data on materials are provided upon request

Recycled materials:

19%

Recycled materials are used in plastic, aluminum and steel parts. These materials make up about 19% by product weight.

Recyclability:

100%

With future recyclability firmly in mind during the design stage, we use homogeneous materials as much as possible. After use, our products can be collected and disassembled into homogeneous materials.

Resins

Polypropylene resins is used to ensure recycling in the future. Resins recovered after use are reprocessed and reused by resin manufactures. Okamura is an active user of recycled resins for its products.

■Steel

Steelmakers use recovered steel to produce new steel. Steelmaking with recovered steel consumes 75% less energy than steelmaking from iron ore.

Aluminum

Recovered aluminum is processed into a recycled form by alloy manufacturers and later into aluminum. Energy consumption can be reduced by 97% by generating recycled metal from recovered aluminum rather than creating aluminum from its source material bauxite.

Indicating materials

Okamura indicates the materials used to facilitate recycling after use.

Reducing Chemicals

Indoor Advantage certificated

Indoor Advantage certification assures that furniture products support a healthy indoor environment by meeting strict indoor air quality(IAQ) chemical emission limits for volatile organic compounds(VOCs). To be certified, products must be tested by independent labs for compliance with the ANSI/BIFMA X7.1, Furniture Emission Standard, for VOC emissions for concern.

Reducing VOCs to safeguard health

Okamura minimizes the use of formaldehyde, toluene, xylene, and other VOCs, which can result in sick building syndrome and allergic dermatitis. Environmental load can be reduced while achieving outstanding comfort and strength.

Indoor Advantage Emission Criteria

Chemical/Chemical Group	Criteria (Seating)
Total VOC	≦ 0.25mg/m³
Formaldehyde	≦ 25ppb
Total Aldehydes	≦ 50ppb
4-Phenylcyclohexene	≦0.00325mg/m³

Minimizing environmental load

Amid calls to limit the use of the earth's resources, the reuse and recycling of post-use products are now a global agenda. To ensure safe and sure progress in recycling, manufacturers must limit the use of substances with environmental loads. The latest round of enhancements in the regulatory framework started with the European Parliament's Restriction of Hazardous Substances (RoHS) directive. Though office furniture is not currently included among the targets of this regime, Okamura is working to reduce substances with environmental impacts in response to customer demand and in anticipation of future legislation.

Reductions of VOCs

Toluene Xylene

Formaldehyde

Aldehydes

4-phenylcyclohexene

Cleared Indoor Advantage criteria

Reductions of Environmentally hazardous substances

Lead

Mercury

Cadmium Chromium VI

PBB (Polybrominated biphenyl)

PBDE(Polybrominated diphenyl ether)

DEHP (Bis (2-ethylhexyl) phthalate)

BBP (Butyl benzyl phthalate)

DBP (Dibutyl phthalate)

DIBP (Diisobutyl phthalate)

*1 These standard values contain exemptions set in the RoHS directive.

*2 Directive put into effect in European Union member states in July 2006 to restrict the use of hazardous substances in electronic and electrical equipment.

LEED v4 Credit Summary

Program	Category	ltem	Contribution
Interior Design and Construction (ID+C)	Materials & Resources (MR)	Interiors Life-Cycle Impact Reduction (1-4 points)	Option 2: Furniture Reuse : Okamura products are long-lasting and durable. Can be reuseback.
	Materials & Resources (MR)	Building Product Disclosure & Optimization- Sourcing of Raw Materials (1-2 points)	18.9% (1/2 Pre-Consumer: 0%, Post-Consumer: 18.9%)
	Indoor Environmental Quality (EQ)	Low-Emitting Materials (1-3 points)	Okamura has Indoor Advantage certificated products.
Building Design and Construction (BD+C)	Materials & Resources (MR)	Building Product Disclosure & Optimization- Sourcing of Raw Materials (1-2 points)	18.9% (1/2 Pre-Consumer: 0%, Post-Consumer: 18.9%)
	Indoor Environmental Quality (EQ)	Low-Emitting Materials (1-3 points)	Okamura has Indoor Advantage certificated products.
Building Operations and Maintenance (O+M)	Materials & Resources (MR)	Purchasing-Facility Maintenance and Renovation (1 point)	18.9% (1/2 Pre-Consumer: 0%, Post-Consumer: 18.9%)
